

DESIGN GUIDELINES

These guidelines are made to assist you when you design/produce a DTU publication.

All typography specifications are described on the following pages and the grid is explained.

There are templates available for the most common publications, all with the DTU colours pre-defined.

COLOURS

The corporate colour of DTU is red.
All secondary colours are free to use - yet no specific institute, center or department has monopoly on a specific colour.

All colours consist of a bright 100% colour and four tints.

The secondary colour you choose should stand alone, yet there are colour combinations that can be recommended.

For further details on the colours, please see www.designguide.dtu.dk

Primary colours (for print purposes)

TYPOGRAPHY

Our corporate font is Neo Sans Pro. It is used in all communication and marketing material produced in professional design programmes, i.e. Adobe Creative Cloud.

Recommended use:
– We mainly use Neo Sans Pro weights Bold, Medium, Regular and Light.
Less used are Ultra and Black. Italic is used for either captions or highlighted texts.
Also see examples presented in slides below.

Our secondary typeface, Arial, is used in Microsoft Office (Word and Powerpoint).

TYPOGRAPHIC STYLES

In the templates, you will find that SOME typographic styles are pre-defined in the 'paragraph styles' menu. Kindly use these. Those that are not already defined you can define more freely - according to your text length, the message you want to come across with and of course your layout.

Please see these pages as inspiration.

If you should have any questions, feel free to contact us for further details / information.
